

# Outer Solar System

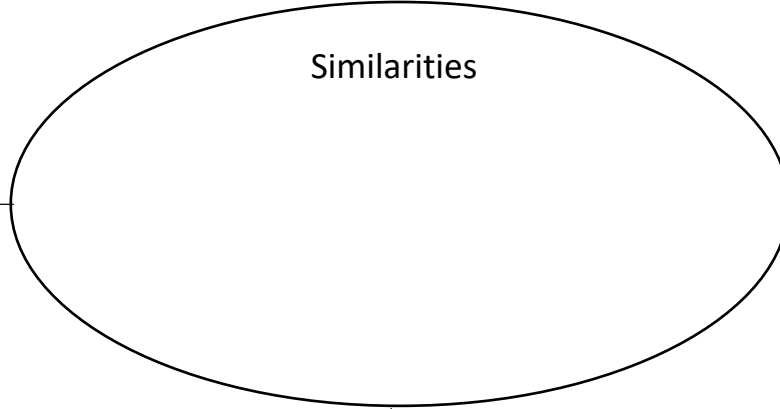

Jupiter

Saturn

Similarities

Uranus

Neptune

- Dwarf planet
  - What is a dwarf planet? How are they like and unlike a planet?
  
  - What planet was previously considered our ninth planet, but was reclassified as a dwarf planet?
  
  - Why do dwarf planets tend to orbit in zones that contain many other objects?
  
  - How big is Pluto?
  
  - The density of Pluto is similar to which moon? This suggest that Pluto is made of what?
  
  - Pluto's orbit around the sun is more \_\_\_\_\_ than those of the planets.
  
  - How many degrees is Pluto's rotation axis tilted?
  
  - How many moons does Pluto have? What are their names?
  
  - What are two other known dwarf planets?
  
  - When will more solar system objects be named dwarf planets?
